Our new **CDM Diagnostics Program** helps construction businesses to reduce risks, improve profits and fully comply with The Construction, Design and Management Regulations.

- ✓ **Reduce the burden of paperwork**
- ✓ **Keep workers working, more efficiently and safer**
- ✓ **Avoid potential corporate manslaughter charges of £<sup>1</sup>/<sub>2</sub> million**

Our **CDM Diagnostics Program** is designed to:

- Increase the competency of key persons & key roles within your business
- Improve the effectiveness of your risk management process
- Enhance your supply chain partnerships & further reduce your potential liability
- Increase the safety of your workers through better communications
- Increase the safety of your sub-contractors and ensuring full CDM compliance

### **The CDM Diagnostics Program costs from £995 + VAT and includes:**

#### **Safety Evaluation**

We review how CDM works for you by examining systems & strategies with your project managers, site managers & safety reps. We will provide you with a written report identifying where improvements can be made to benefit your business; reducing your costs & increasing your profits.

#### **Strategy Agreement Session**

We will conduct a 1/2 day Strategy Agreement Session with your management team to discuss where improvements can be made, why they should be made & the benefits they bring.

#### **The Safety Strategy**

We will then create **The Safety Strategy** that everyone is committed to completing within specific and measurable timescales.

**To find out how the CDM Diagnostics Program can benefit your business contact Andrew Scargill today on 07870 777303**
